

Supplement: Non-response bias assessment (early versus late respondents)

Method

As described in Section 3.3 of the manuscript, early respondents are those who started the questionnaire within 48 hours of the initial dispatch on 17 December 2025 (n = 126) and late respondents those who started it on or after the reminder on 27 January 2026 (n = 145). The dispatch times are taken as the time of the first response on each day (17 December, 10:37; 27 January, 11:28). Responses between the two windows (n = 49, including one pilot participant who received the live link before the dispatch) are excluded from the comparison. Chi square tests of independence with Cramér's V were computed for gender, age band, healthcare setting and the Shadow AI item. Expected cell counts are 5 or more in every cell.

Table S1. Summary of tests

Variable	χ^2	df	p	Cramér's V	n
Gender	1.74	1	0.188	0.08	271
Age band	1.93	5	0.859	0.08	271
Healthcare setting	0.32	2	0.852	0.03	271
Shadow AI item	0.08	2	0.963	0.02	271

Table S2. Gender by response wave. $\chi^2(1) = 1.74$, p = 0.188, V = 0.08

Gender	Early n (%)	Late n (%)
Female	71 (56.3)	69 (47.6)
Male	55 (43.7)	76 (52.4)
Total	126	145

Table S3. Age band by response wave. $\chi^2(5) = 1.93$, p = 0.859, V = 0.08

Age band	Early n (%)	Late n (%)
20 to 29	7 (5.6)	12 (8.3)
30 to 39	39 (31.0)	45 (31.0)
40 to 49	24 (19.0)	24 (16.6)
50 to 59	31 (24.6)	31 (21.4)
60 to 69	20 (15.9)	24 (16.6)
70 and over	5 (4.0)	9 (6.2)
Total	126	145

Table S4. Healthcare setting by response wave. $\chi^2(2) = 0.32$, p = 0.852, V = 0.03

Healthcare setting	Early n (%)	Late n (%)
Hospital	56 (44.4)	69 (47.6)
Medical care centre	11 (8.7)	13 (9.0)
Practice	59 (46.8)	63 (43.4)
Total	126	145

Table S5. Shadow AI item by response wave. $\chi^2(2) = 0.08$, p = 0.963, V = 0.02

Shadow AI item	Early n (%)	Late n (%)
Own use	39 (31.0)	46 (31.7)
Observation of colleagues	26 (20.6)	28 (19.3)
No case known	61 (48.4)	71 (49.0)
Total	126	145

Conclusion

None of the four comparisons is significant and all effect sizes are negligible. The distribution of the Shadow AI item is almost identical across waves. On the late respondent proxy, there is no indication that self selection into the sample is related to the primary outcome.
